Motion Graphics & Visual Systems Masterbook

Author: Prakhar Mishra | MMMUT Gorakhpur

Curriculum Overview

An end-to-end curriculum on motion design, animation physics, kinetic typography, and high-impact UI micro-interactions for modern web applications and digital interfaces.

Core Divisions

Division 1: Foundations of Visual Rhythm and Animation Physics (12 Disney Principles Adapted for Digital UI)

Division 2: Easing Curves, Cubic Beziers, and Natural Motion Dynamics

Division 3: Kinetic Typography, Hierarchy, and Temporal Layout

Division 4: 2D & 3D Space Composition, Depth Maps, and Parallax Stacking

Division 5: UI Micro-Interactions, State Transitions, and Reactive Motion in Web Products

Division 6: Performance Budgeting: 60fps GPU Compositing, WebGL, and Framer Motion Optimization

Application in Product Design

Translates motion design theory into performant CSS keyframes, SVG animation pipelines, and Framer Motion spring physics for developer tools, SaaS dashboards, and consumer software.
